#### **DETAILED ACTION**

Applicants' arguments, filed 09/10/10, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

### Claim Rejections - 35 USC § 112 - New Matter

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 1 now recites "wherein the preservative is dispersed in the vicinity of the surface of the feed additive composition". While the instant specification teaches preservative agents may protect a biologically active substance and intrusion in the vicinity of the surface of the rumen bypass product, it does not disclose applying the preservative in the "vicinity" of the surface (see pg 15 ¶ 44).

Examiner notes the preservative is disclosed to be applied in a coating composition, but a coating composition is not a broad as being in the "vicinity" of the

surface which may include within the core. As such, the surface coating disclosure does not support the newly amended limitation.

### Claim Rejections - 35 USC § 112 - Indefinite

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "vicinity" in claim 1 is a relative term which renders the claim indefinite.

The term "vicinity" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. Specifically, it is unclear how far from the surface the preservative may be present.

## Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-12 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Kitamura et al (US 5,676,966) in view of Bischoff et al (US 4,770,876).

Applicants assert the new amendment overcomes the prior art where the claim now recites "wherein the preservative is dispersed in the vicinity of the surface of the

feed additive composition", thus requiring the preservative on the surface and not in the core. Second, Applicants assert there is no motivation to add the preservative of the secondary reference where the common components are not the core components.

Examiner disagrees. First, while the claim does require the preservative to be dispersed in the vicinity of the surface, the "vicinity" is indefinite, as discussed above. As such, the vicinity may be considered anywhere near the surface, which includes into the core. As such, the preservative need not be only on the surface.

Additionally, the claims are modified by the transition phrase "comprises", which is an open ended transition phrase. Being open, additional components may be present, including preservative within the core. Thus, even preservative homogeneously mixed within the feed additive would still read on the instant claims.

Second, Bischoff et al discloses it was known in the art to add propionic acid to animal feed compositions as a preservative agent. As such, the skilled artisan, when formulating a protecting coating, such as made obvious by the primary reference, would also include a preservative, given their common function of providing protection to the aminal feed formulation. As such, the skilled artisan would look to preservatives which are known to be compatible with the components disclosed by the primary reference. Thus, the fact that the propionic acid was known to be compatible with lecithin and amino acids, albeit with an additional active agent, such teaching suggests it would be an appropriate addition to the composition of the primary reference for its intended use, i.e. to preserve the active agent in the core.

#### Conclusion

No claims allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BENJAMIN PACKARD whose telephone number is (571)270-3440. The examiner can normally be reached on M-R 8-5 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frederick Krass can be reached on 571-272-0580. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
